

# AUTOMATIC

# **STRAPPING MACHINE**

# **MODEL: S600**

# **OPERATION MANUAL**

2021-08-12

# **EC** Declaration of Conformity

According to the following EU Directives:

- Machinery Directive: 2006/42/EC
- Low Voltage Directive: 2014/35/EU
- Electromagnetic Compatibility Directive: 2014/30/EU

Declare that the machines mentioned hereafter:

Product: Strapping Machine
Model: S600
Serial No.:
Functions: They are used for packaging products by polypropylene

They are designed and manufactured in compliance with the essential health and safety requirements of the Machinery Directive and Electromagnetic Compatibility Directive, and are based on the following European harmonized standards:

- EN 415-1:2000+A1:2009, Safety of packaging machines Part 1: Terminology and classification of packaging machines and associated equipment
- EN 415-8:2008, Safety of packaging machines Part 8: Strapping machines
- EN ISO 12100:2010, Safety of machinery General principles for design Risk assessment and risk reduction
- EN ISO 13849-1:2008, Safety of machinery Safety related parts of control systems Part 1: General principles for design
- EN 60204-1:2006+AC:2010, Safety of machinery Electrical equipment of machines Part 1: General requirements
- EN 55011:2009+A1:2010, Electromagnetic compatibility Industrial, scientific and medical (ISM) radio-frequency equipment- Radio disturbance characteristics- Limits and methods of measurement
- EN 61000-4-2:2009, Electrostatic discharge (ESD)
- EN 61000-4-4:2012, Electrical fast transient/burst requirements (EFT/Burst)
- EN 61000-4-6:2014, Immunity to conducted disturbances, induced by radio-frequency fields (CS)

Authorized representative in European Community: (if applicable)

Representative : -

Place / Date : Taichung City, Taiwan. / April 22, 2016.

# **1. GENERAL SAFETY INSTRUCTIONS**

## 1.1 Basic Operation

- The manual and the safety remarks are to be read before use. The operator manual should be kept with the machine at all times. Intervals for maintenance and inspections are to be adhered to.
- This machine was built with state of the art technology and rigid adherence to safety standards.
- Unless used properly, it can cause injury to operators or persons in close proximity to the machine. In addition, improper use can cause damage to the machine or property around the machine.

### **1.2 Basic Safety Precautions**

- The user is to be instructed in all other generally applicable legal and other mandatory regulations relevant to accident prevention and environmental protection in addition to the operating instructions.
- For safety reasons, long hair must be tied back or otherwise secured, garments must be close fitting and no jewelry may be worn.
- Use protective equipment whenever required by circumstances or by law.
- Carefully observe all safety instructions and warnings attached to the machine and make sure that they are always complete and perfectly legible.
- Always make certain that persons being trained and instructed in working on or with the machine are permanently supervised by an experienced person.
- Work on the electrical system and equipment of the machine is only to be carried out by a skilled electrician or by persons under the supervision and guidance of a skilled electrician and in accordance with the rules and regulations of electrical engineering.

## **1.3** Safety Instructions Governing Specific Operational Phases

- Avoid any operation mode that might be unsafe.
- All necessary precautions to ensure that the machine is only used being in a safe and reliable state are to be taken. The machine is only to be operated if all protective and safety devices, including removable safety devices, emergency shut-off equipment, noise-protection elements and exhaust systems are in right place and fully functional.
- The machine is to be checked for damage and defects at least once per work shift. Any changes including the working behavior of the machine are to be reported to competent persons immediately. If necessary, the machine is to be stopped and locked immediately.
- In case of any malfunction the machine must be stopped and locked until the defect has been eliminated.
- Generally make sure that nobody is at risk before starting up the machine.
- All personnel that will be operating this machine should be thoroughly trained in all phases of operation and safety.
- Always tighten unscrewed connections after maintenance and repair.
- After completing maintenance and repair all safety devices removed for setting up or repairing the machine must be reinstalled and checked for functionality prior to putting the machine back into service.
- To minimize the environmental impact all consumables and replaced parts must be disposed of safely.
- Before starting the machine check that the accessories have been stowed away safely.
- Do not attempt any operation that may be a risk to the stability of the machine.

## **1.4** Warning of Electrical Dangers

- Immediately remove power to the machine in case of trouble in the electrical system.
- Replace a fuse with one with the same style and ratings; pay particular attention to matching the specified current.
- Any electrical work performed on the equipment must be conducted by a skilled electrician or under the supervision of a skilled electrician. All work must be observed good electrical engineering practice and follow safety rules and local wiring standards.
- Inspect the electrical equipment of the machine at regular intervals. Tighten any loose connections. Check wiring for scorch marks; replace scorched wiring and determine and correct the reason for the overheating.
- When working on live equipment, ensure that a second person is available to cut power in case of an emergency. When appropriate, secure the working area with safety tape and a warning sign. Use insulated tools for electrical work.
- Before working on high-voltage assemblies, turn off the power supply. Carefully discharge the supply cable and short-circuit any energy-storage components such as capacitors.
- If the equipment was moved, carefully refit and refasten all parts removed for transport before reapplying power.
- Before moving the machine, remember to disconnect the power cable.

# 1.5 Grounding Instructions Shall Include the Following

- This product must be grounded. In the event of an electrical short circuit, grounding reduces the risk of electric shock. This product is equipped with a cord that has a grounding wire and an appropriate grounding plug. The plug must be plugged into an outlet that is properly installed and grounded in accordance with all local codes and ordinances.
- If repair or replacement of the cord or plug is necessary, connect the ground wire to the ground terminal of the plug. The wire with green insulation (with or without yellow stripes) is the grounding wire.
- Check with a qualified electrician or service person if the grounding instructions are not clear or if in doubt about the proper grounding of the machine. Do not modify the plug provided; if it will not fit the power outlet, have the proper outlet installed by a qualified electrician.
- This product is designed for use on a nominal 230 volt AC circuit and has a grounding plug.

# DANGER!

# Improper installation of the grounding can result in electrocution.

### **1.6 Before Operating**

- Verify that the power line voltage is correct.
- The machine must be properly grounded to avoid a shock hazard. All wiring must be in accordance with local wiring standards.
- The strapping machine can only be operated with polypropylene (P.P.) strapping; do not use polyester (PET) strapping or polyethylene (PE) cord strap.

### **1.7 During Operation**

- The weight of the package cannot exceed 70kg. For package weight over 25kg, it may be necessary to use lifting aids for handling; while package weight over 40kg, it's necessary to handle it with conveyor system.
- The size of the package should not be less than 70 mm × 20 mm (2.75 inches × 0.75 inches).
- While running, check the unit for any unusual sounds or smoke emissions.
- Keep away from the inside of the arch while the machine is operating; do notyou're your hands or body into the arch when the machine is running.

NOTE: It is normal for the heater tongue to smoke during the sealing operation.

#### 1.8 After operating

- Remove dust and dirt from the unit
- Turn off the power when the machine is not in use.

# 1.9 Signs

| Â  | Caution!<br>Electric Shock Hazard.            |
|----|---|
|    | Caution!<br>Hot Surface.                      |
|    | Caution!<br>Moving Parts Can Crush Hand.      |
| TO | Caution!<br>Pinch Point Entanglement          |
|    | Caution! Blade.<br>Cutting of Fingers or Hand |
|    | Wear Eye Protection                           |
|    | Refer to Operator Manual                      |

# **2. MACHINE INFORMATION**

## 2.1 Areas of Application

This plastic strapping machine can be used for a wide range of applications where the minimum package width is at least 70mm, and the minimum height is 20mm.

This machine is particularly suitable for heavy packaged goods as well as printed products, boxes, etc.

Packaging Limitation

It's not possible to pack:

- Products larger or heavier than that allowed.
- Wet Products
- Flammable products
- Explosive products
- Agri-foodstuffs
- Pharmaceuticals
- Hazardous products

#### 2.2 Environmental Information

The strapping machine shall be installed in the following conditions:

- Supply voltage: +-10% nominal supply voltage
- Source frequency: +-10% nominal frequency
- Ambient temperature:  $5^{\circ}$ C  $40^{\circ}$ C ( $41^{\circ}$ F  $104^{\circ}$ F).
- Relative humidity: not exceed 35~85%RH
- Please provide a suitable illumination around the machine for safety operation.

#### Conditions For Use

Make sure there is room for easy application and maintenance

The machine must be installed in a closed, well-ventilated area where there are no explosions or fire hazards Position the machine in a place free of humidity, flammable materials, gas or explosives. Make sure that it is level.

Please do not spray water or wet wipe machine body.

```
Noise - characteristic values
```

The noise emission values determined according to EN ISO 3746 for the sound power level or EN ISO 11202 for the sound pressure level at the workplace on the basis of the working conditions are as below:

A measurement uncertainty allowance of K = 4 dB(A) applies to the stated emission values.

Sound power level  $L_{WA} = 88.7 \text{ dB}(A)$ 

Emission sound pressure level at the workplace L<sub>PA</sub> = 75.3 dB(A)

To minimize the emission sound pressure level, machine is equipped with a timer standby mode that can be adjusted by technician.

#### Demolition and Waste Disposal

The machine does not contain dangerous components or substances which require special disposal procedure. For that which concerns material elimination, comply with the Standards in the country where the machine has been disassembled.

#### Caution: do not leave waste polypropylene strap on the floor to minimize slip hazards.

#### 2.3 Machine Description

- Automatic strapping machine for polypropylene (PP) strapping material.
- Strap width 9-12mm adjustable.
- High efficiency heater plate.
- Front & rear table are hinged with quick release structure.
- Loop ejection in case of strapping cycle without package.
- Extra strong construction.
- Simple and user-friendly operation.
- Automatic strap threading system.
- Automatic strap end detection and ejection.
- Dispenser inside cabinet for safety
- Table made of stainless steel.
- Strap tension adjustable from soft to very high.
- Automatically second try feed function to increase efficiency

# 2.4 Safety Devices

#### DANGER!

# Operate the machine only when all safety devices are at their place and are functioning <u>correctly.</u>

The machine has been constructed in accordance with the applicable legal regulations.

The machine is reliable in operation. Nevertheless the machine may constitute a danger if it is operated in improper or undue condition.

Danger points that cannot be avoided due to equipment design are equipped with safety devices. If necessary, these points are marked on the machine with warning signs, and in the manual under working safety instructions.

The machine is equipped with safety devices as:

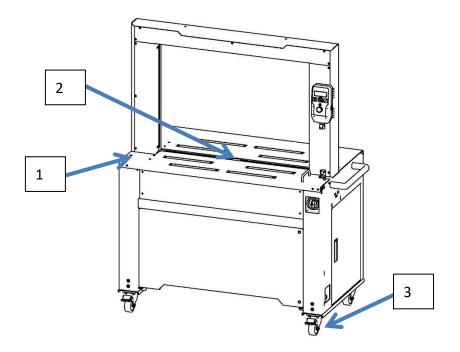

- Warning labels
- Live parts are covered
- Table cover with screw fixed (1)

Only Polypropylene strapping can be used in this machine. The use of other synthetic Straps can produce substances hazardous to health.

The heating unit operates at a very high temperature in order to melt the P.P. strapping. To prevent burns, avoid contact with this area. (2)

To move the machine, the two lockable casters (3) must be unlocked. Relock the two casters when the machine is in its new position.

The machine is turned on when it is connected to AC power and the main power switch, located on the front operating panel, is placed in the ON position. After approximately 1 minute, the heating element will reach its operating temperature and the machine will be ready for use.

If it is necessary to make adjustments inside the machine during operation, after a strap jam for example, the table top can be unscrewed. Observe caution as the machine is still fully functional with the covers removed. If machine with safety switch, when table top is opened, safety switch is activated. This will remove power but heating element is keeping heating.

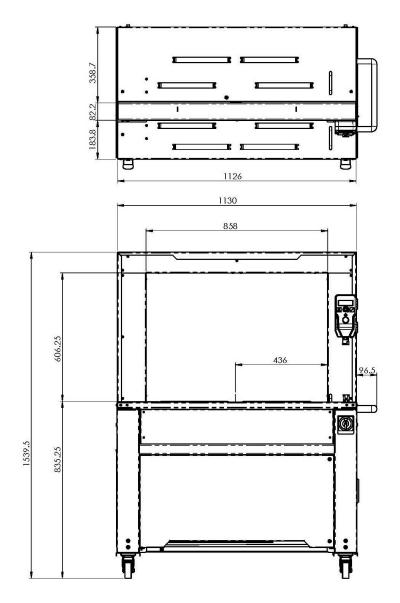

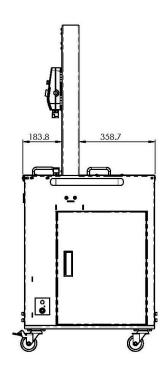

# 2.5 Technical Specification

# 2.5.1 Electrical Specification

| System Configuration | L1+N+PE (GROUND)    | L1+N+PE (GROUND)  |  |
|----------------------|---------------------|-------------------|--|
| Nominal Power        | 0.72 kW             | 0.72 kW           |  |
| Rated Current        | 3.1 A               | 6.5 A             |  |
| Rated Voltage        | 200V/220V/230V/240V | 100V/110V         |  |
| Rated Frequency      | 50 Hz               | 60 Hz             |  |
| Type of Current      | AC- single phase    | AC – single phase |  |

## 2.5.2 Technical information

| STRAP WIDTH      | 9mm/12mm ONLY ADJUSTMENT   |
|------------------|--|
| STRAP THICKNESS  | 0.45mm – 0.7mm   |
| STRAP COIL       | Coil diameter: 200mm (230mm/280mm as option)<br>Width: 190mm-200mm |
| MACHINE SIZE     | 1130mm (L)* 619mm (W) * 1535mm (H)                                 |
| NET WEIGHT       | 180 Kg   |
| TENSION RANGE    | 50 N – 650 N   |
| SPEED            | 37 STRAP/MIN   |
| TABLE HEIGHT     | 835mm  |
| NOISE EMISSION   | 78 dB  |
| AMBIENT TEMP.    | 5°C - 40°C   |
| MIN PACKAGE SIZE | 70mm*20mm  |
| MAX PACKAGE SIZE | 850mm*600mm (standard arch size)                                   |

## 2.6 Identification Data of the Machine

Each model is provided with a plate where it is easy to recover data which must be communicated to the manufacturer in case of problem or when requesting spare parts etc. (ref. 1-2-3-4) This plate also carries electrical technical data for installation of the machine. (ref. a-b-c-d-e-f-g).

- f. Rated power (Watts)
- g. Weight (kg)

# **3. BEFORE OPERATING THE MACHINE**

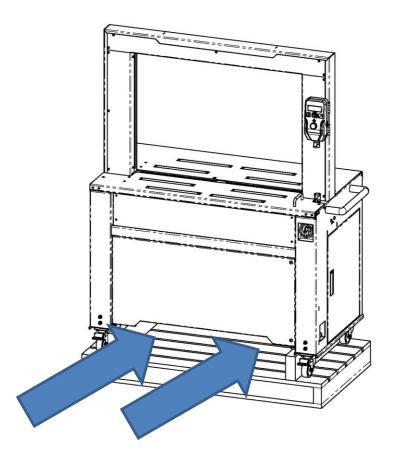

## 3.1 Shipping

The machine is delivered as a transport unit. The machine is loaded onto a wooden pallet with Polyester strap secured. Outside with carbon box also with Polyester strap secured.

## 3.2 Transportation & Unload Machine from Pallet

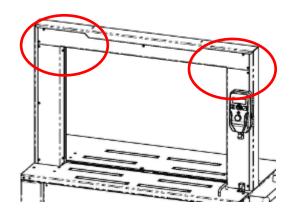

The machine needs to be secured well on wooden pallet. The side edge of machine body needs to be sitting on the pallet to make sure casters are free (1). Remove protection material around the machine like stretch film and plastic cover, and then do remove the Polyester strap.

Please carry the machine by having forklift's fork under the machine, be careful if you have foot bar switch to avoid not damaged from the forklift.

## 3.3 Installation

- a. Remove packaging material and check if the machine is complete without any transportation damage
- b. Remove cushion material inside corners of the arch.

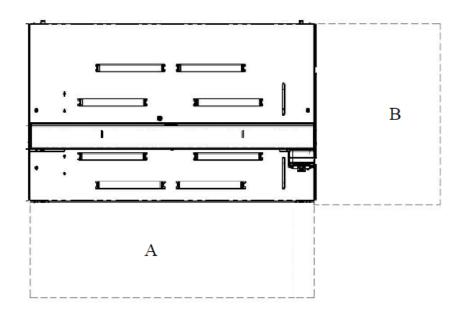

c. After positioning the machine, do make sure lock brake of casters (two front casters with brake)

Noted: when moving the machine again, do remember to unlock the brake of casters, then relocate and lock again.

Noted: when moving the machine, do turn the machine power off and make sure cable is on the table in case cable damaged.

# 3.4 Operation Clearance

Keep the area (A) and (B) free for the operator.

The area (A) is necessary for operating strapping machine.

The area (B) is necessary for changing the strap.

## 3.5 **Operation Elements**

#### a. Main Power Switch:

Provide the machine with Power. Switch to "I" for ON to operate the machine; switch to "-" for OFF to shut power off.

#### b. LCD Display:

Indicate condition and error message of the machine

#### c. Page Select:

This button is to select pages of function of this LCD Display.

#### d. Soft Tension:

In the main page, this button could switch between tension and soft tension.

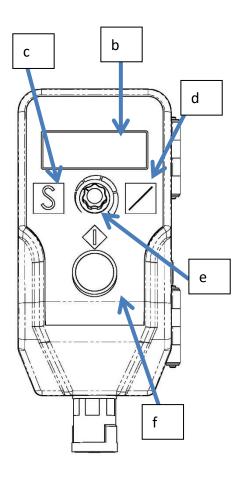

Besides the main page, this button could work as "home page" button.

#### e. Potentiometer:

Press down to select/confirm. Rotate clockwise to increase value, and rotate counter clockwise to decrease value.

#### f. Start Button:

To start machine with select operation

## 3.6 Auto Threading of Polypropylene Strap

#### 3.6.1 Strap Specification

Material: Polypropylene Strap

Width: 9mm/12mm only adjustment

Thickness: 0.45mm-0.7mm (any strap outside this range, please contact EXTEND for further studying)

Core diameter: 200mm (230mm and 280mm as option)

Core width: 190mm-200mm

Strap with excessive chamber (5mm with 200cm length) cannot be used.

#### 3.6.2 Strap Coil Installation

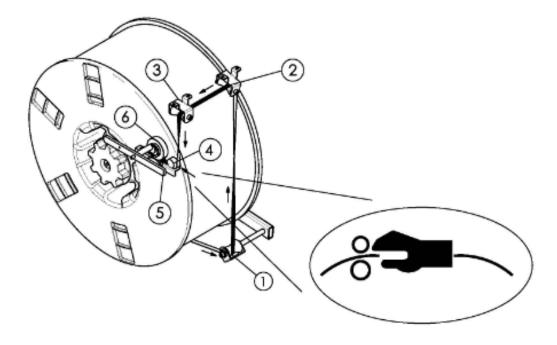

- a. Open the side door
- b. Release the Reel Nut Handle by clockwise rotation
- c. Take out the outer flange
- d. Remove the old strap coil or other dust material, then install the new strap coil onto the drum according to the direction shown on dispenser label
- e. Put back the outer flange and right the Reel Nut Handel by counter clockwise rotation.
- f. Remove the protect straps and the sticker on the new strap coil.

#### 3.6.3 Auto Thread Function

- a. Turn on the main power switch
- b. Press "Start Button" to make machine self-detect
- c. Make sure LCD display showing "REMOVE LAST STRAP, LOAD NEW STRAP"
- d. Make sure no previous strap left in the chute
- e. Thread strap as indicate picture/sticker through three guide rollers (1,2,3)
- f. Keep threading strap until it hits the pool feed rollers (6), at this moment the strap indicator (4) should be light off
- g. Lift the lever (5) and further insert the strap around 2-3 cm ahead the rollers
- h. Check LCD Display, it will show "AUTO THREAD, PUSH START BUTTON"
- i. Press "Start Button" to start auto threading function

# Noted: If the strap is fed too much more than 5 cm ahead roller, it could cause auto threading fail.

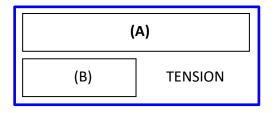

Noted: Please make sure PP strap is in correct curve down direction, to have the PP strap insert into machine in opposite direction, it might cause auto threading, feed, refeed...functions not stable.

# 4. OPERATING THE MACHINE

There are many functions of the machine in LCD Display, showing as below

## 4.1 Main Page

Main page shows current situation of machine and also is able to adjust tension setting.

(A) Shows current strapping mode (operation mode):

#### MANUAL STRAP READY

It means under manual mode, the machine will do strap only when operator press Start Button.

#### AUTO STRAP READY

It means under auto 1 strap mode, the machine will automatically do one strap when table sensor is ON

#### CONTI STRAP READY

It means under continuous strap mode, the machine will automatically keep doing straps until table sensor is OFF

(B) Shows current tension setting:

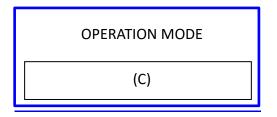

▶ <u>0% - 100%:</u>

When operator press the Potentiometer, this number will twinkle, then operator could rotate Potentiometer to change the value. And operator can press the Potentiometer again to confirm the value.

SOFT:

No matter what is current tension setting, as long as operator pressing SOFT TENSION Button, then the machine will directly go to soft tension mode. If the Operator press SOFT TENSION Button again, then the machine will go back to set tension value.

# 4.2 Operation Mode Page

Operation Mode allows operator to change strapping mode.

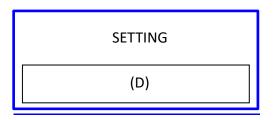

(C) Shows strapping mode and detail setting of mode. Operator could press Potentiometer, then the (C) will twinkle then it's allowed to change to different mode

- MANUAL STRAP  $\rightarrow$  push Potentiometer to confirm  $\rightarrow$  back to Main Page (shows MANUAL STRAP READY)
- AUTO STRAP → push Potentiometer to confirm → T1 DELAY \_ S (this timer means the delay time after package is on the table sensor, from 0.0 to 5.0) → rotate Potentiometer to set value then press to confirm → back to Main Page (shows AUTO STRAP READY)
- CONTI STRAP → push Potentiometer to confirm → T1 DELAY \_ S (this timer means the delay time for 1st strap after package is on the table sensor, from 0.0 to 5.0) → rotate Potentiometer to set value then press to confirm → T2 DELAY \_ S (this timer means for all following straps time gap until package is out of the table sensor, from 0.0 to 5.0) → rotate Potentiometer to set value then press to confirm → back to Main Page (shows CONTI STRAP READY)

#### Noted: T1 delay time is shared for AUTO STRAP and CONTI STRAP

Noted: During your setting, if it stays over 10 seconds, it will automatically go back to Main Page with your current setting.

## 4.3 Setting Page

(D) Shows current setting of machine, operator could change the setting through the Potentiometer.

COOLING TIME \_\_S:

This is strap welding cooling timer adjust. If you have big tension with hard package, longer cooling time could help you with better seal on strap.

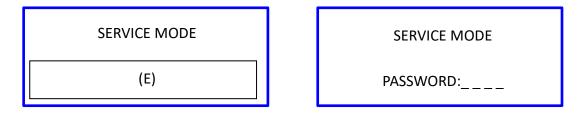

Press Potentiometer  $\rightarrow$  number \_ will start twinkle  $\rightarrow$  rotate Potentiometer to change value (from 0.0 to 1.0)  $\rightarrow$  press Potentiometer to confirm

HEATER TEMP \_\_\_ %

This is heater plate temperature setting. This setting is depend on working environment and strap material, sometime cooler surrounding temperature or thicker strap material would need higher temperature setting on the heater plate.

Press Potentiometer  $\rightarrow$  number \_ will start twinkle  $\rightarrow$  rotate Potentiometer to change value (from 0 to 100)  $\rightarrow$  press Potentiometer to confirm

#### 4.4 Service Mode Page

For service only, this function allows technician go detail check (password protect, please contact for password), you could rotate the Potentiometer to select manual function then press Start Button to run.

► <u>FEED</u>

Press Start button to manual run M2 motor forward

➢ <u>REFEED</u>

Press Start Button to manual run M2 motor backward

➢ <u>CAM</u>

Press Start Button to manual run M1 motor forward

➢ 2<sup>nd</sup> FEED SOLENOID

Press Start Button to activate 2<sup>nd</sup> feed solenoid

AUTO FEED MOTOR

Press Start Button to run auto threading motor

Language (Option)

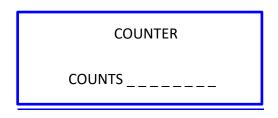

Rotate the nut for switch language & Press Start Button to confirm

#### 4.5 Factory Setting Page

This is for factory setting usage only, change the setting will have no warranty protect.

#### 4.6 Counter Page

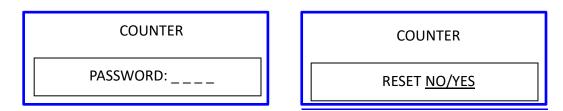

This machine is equipped with strap cycle counter, furthermore it is allowed to be reset on this counter.

How to reset counter?

In the Counter Page, press Potentiometer, then it will show as below to enter password (same as SERVICE MODE password), press Potentiometer to confirm.

Then it will show RESET, please rotate and press Potentiometer to confirm.

# 5. ADJUSTMENT

## 5.1 Strap amount in the Pool Box

The recommended strap amount in Pool Box will be 2 of full arch size, it will be sufficient for 3-5 strap cycles. (Depend on package size, fewer cycles for larger package size)

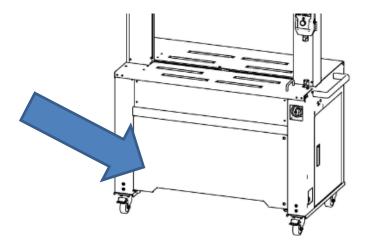

Noted: Excessive strap amount stored in Pool Box will cause feed problem (too curved)

#### Noted: Insufficient strap amount stored in Pool Box will cause short feed

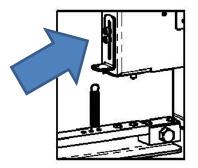

Noted: Strap stored in Pool Box overnight will make itself too curved and have chance to cause feed problem.

The adjustment of strap amount of Pool Box as following:

a. Open the front door

b. Loose two screws for spring bracket, lifting upward for stronger spring force with more strap amount, vice versa

c. Adjust to proper position on the spring bracket, then tight the screw

# 5.2 Pool Feed pressure & gap

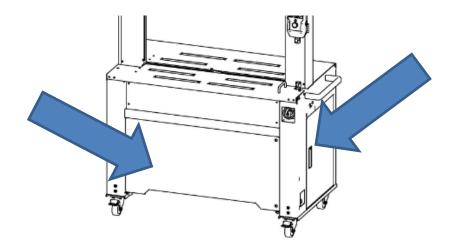

The machine is well set for the Pool Feed pressure and gap. It might need some adjustment when you have smooth strap on this machine.

#### Noted: Excessive pressure for Pool Feed Roller might cause strap squeezed then jammed

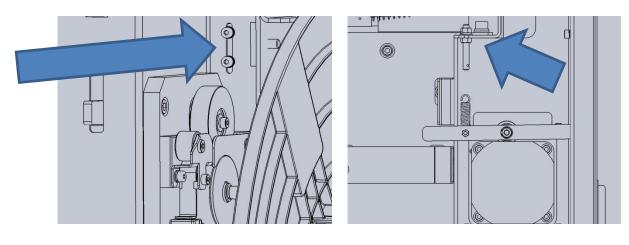

# Noted: Insufficient pressure for Pool Feed Roller might cause insufficient strap amount in Pool Box.

The adjustment of Pool Feed pressure and gap as following:

a. Open the front door and side door

 b. Two screws from the side door could adjust the limit plate to control gap between Pool Feed Rollers, the suggested setting is 0.1mm for the gap. Then from the front door, there's one spring with nut to adjust pressure between Pool Feed Rollers.

# 5.3 Feeding / Refeeding pressure & gap

The machine is well set for Feeding/Refeeding pressure and gap. It might needs some adjustment when you have smooth strap or different thickness on this machine, to avoid short feed or feed jam issue happened.

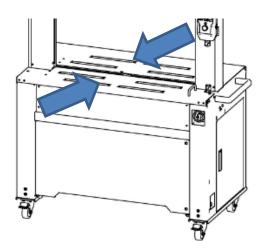

# Noted: Excessive or insufficient gap between Feed Rollers might cause failure for auto threading and 2<sup>nd</sup> try feeding

Noted: Excessive pressure for Feed Rollers might cause Z shape in bandways

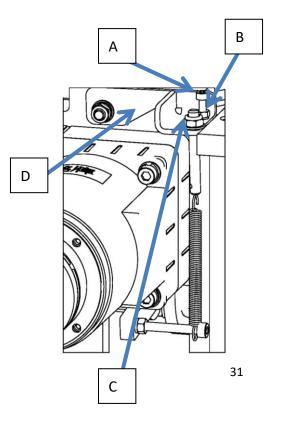

Noted: Insufficient pressure for Feed Rollers might cause short feed

The adjustment of pressure and gap of Feed Rollers:

a. Open front and rear table cover

- b. Remove strap out from the Feed Rollers
- c. Adjust screw (A) for gap, to make sure driving and driven rollers slightly touched, then move outward for two turns on screw, and then lock the nuts (B) to fix the adjustment.
- Adjust nut (C) for pressure, to make sure the spring force is able to hold the lever (D) downward

#### 5.4 Tension

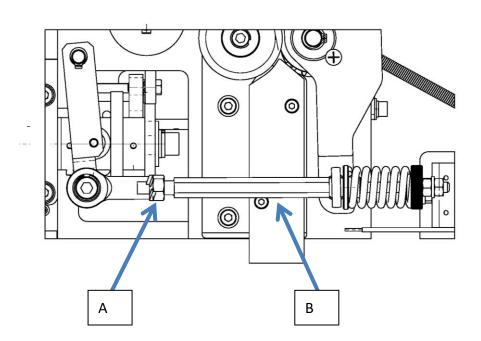

The machine is well set for Tension. It might needs some adjustment when you have smooth strap or different thickness on this machine, or you have different application.

#### Noted: Excessive Tension might cause damage on strap then jammed

# Noted: Excessive Tension might also cause Tension Roller touch strap in zero position then having Feeding or Refeeding problem.

The adjustment of Tension:

- a. Open front and rear table cover
- b. Make sure with strap between Tension Rollers
- c. Use LCD function "SERVICE MODE" and manual run CAM to Tension Position
- d. Release nut (A) and adjust the rod (B)

- e. When the Tension Roller slightly grabs the strap, then adjust the rod for 1 full turn, then lock the nut to fix the adjustment
- f. Use LCD function "SERVICE MODE" and manual run CAM back to Zero Position

#### 5.5 Brush in Arch

The machine is well set for Brush in Arch to avoid strap floating or flipping.

# Noted: Brush in Arch might needs some adjustment for special package or different application or different strap width.

The adjustment of Brush:

Release screws to adjust brush

≻ Left:

Left Upper: Brush slight touch width of strap

Left Lower: Brush covers 1/3 width of strap

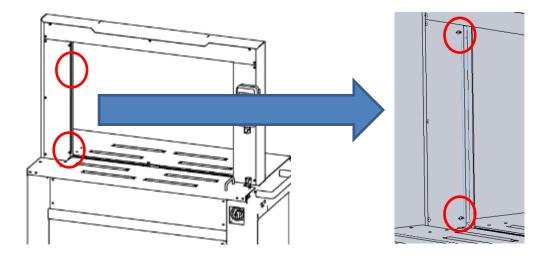

Upper:

Complete open

**Right**:

Right Upper: Brush covers 2/3 width of strap

Right Lower: complete close

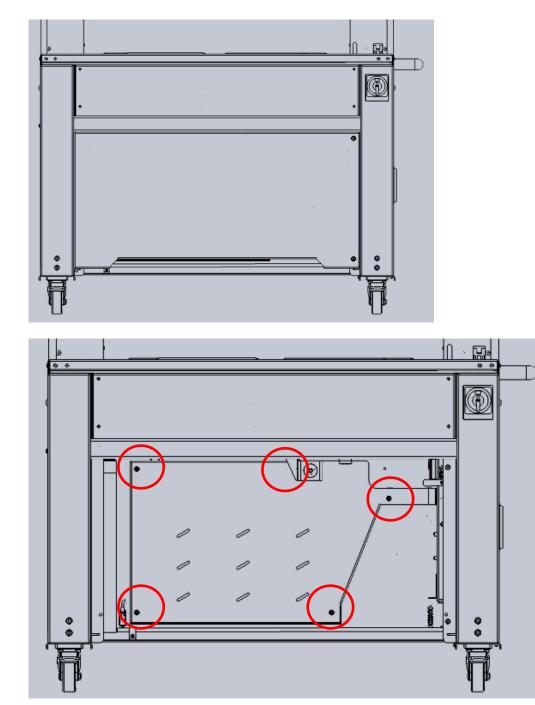

## 5.6 Change between 9mm and 12mm

The machine is able to change between 9mm and 12mm strap only adjustment.

#### Noted: Tool Needed

Change between 9mm and 12mm:

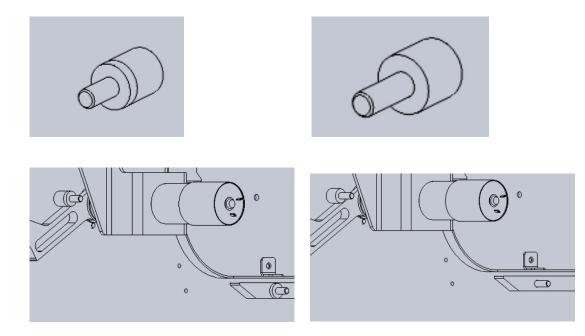

a. Open front door and remove 5 nuts to take off the Pool Box Cover

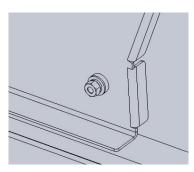

b. Put necessary spacer in the Pool Area:

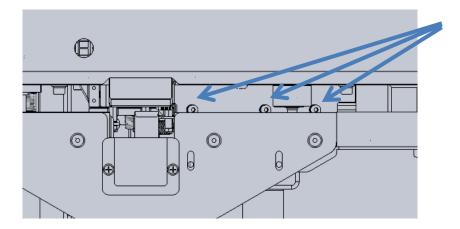

Long spacer + short spacer = 12mm application

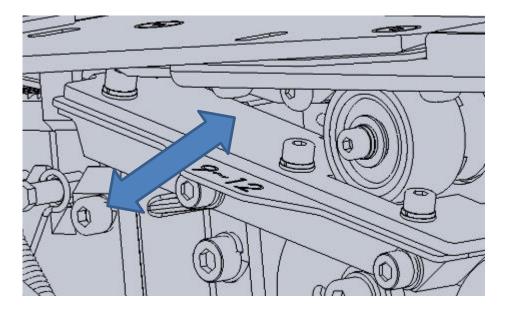

Long Spacer = 9mm application (remember to fix the short spacer outside in case it's missing)

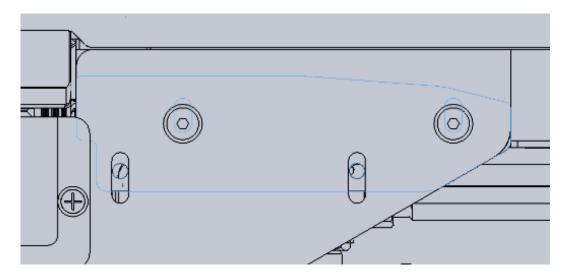

c. Open the arch and release 3 screws for Feeding Bandway

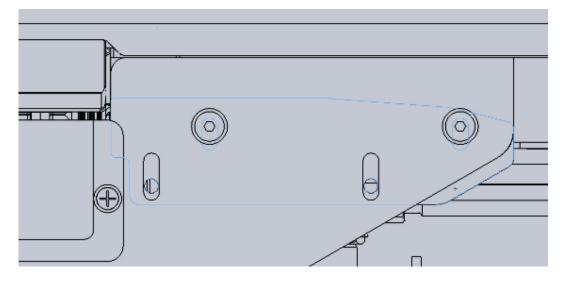

d. Adjust the plate to touch strap then pulling outward about 1mm more

e. Adjust the Arch Bandway Right to touch strap then pulling outward about 1mm more

- $\overline{\odot}$  $\bigcirc$ ന Qo Qο
- f. Adjust front table cover, there are two screws on each side, loose the screws then move front table forward or backward to fit with strap, then pulling out around 0.5mm more.

g. Adjust brush, follow instruction in EXS-158 PLUS operation manual 5.5 Brush in Arch

# 6. TROUBLE SHOOTING

### Error List:

LCD Display will show error situation for this machine, at the same time technician could open the electric box check LED lights on main PCB in detail.

### ERROR (M313), LCD FAIL (J6)

It means there's no signal between LCD panel board and main PCB. Please check the connection/wiring is good and tight, or replace new LCD panel board.

### ERROR (M302), MOTOR ISSUE

It means PCB drives CAM motor over 3 seconds but no signal back to PCB. Please go to service mode to manually drive CAM motor, if it runs continuously without any stop, it means the position limit switch (approx. sensor) is failing. If the motor can't run in service mode, please check CAM motor cable connection or replace new CAM motor.

### ERROR (M305), AUTO THREAD FAIL

It means auto threading is fail.

- Please go to service mode to manually run auto thread motor if it's normal, if it's not running, please check cable connection or decrease pressure for auto thread arm.
- Please make sure the auto thread arm should keep close when pool feed motor runs strap into feeding roller. If not, please increase pressure for auto thread arm.
- Please make sure the auto thread arm should keep open after strap is arrived feeding roller. If not, please increase pressure for auto thread arm.
- Please make sure feed roller are in good adjustment for gap (please follow operation manual 5.3 Feeding / Refeeding pressure & gap)
- Please make sure all strap guiding are in proper adjustment, if the adjustment is too tight, it could catch the strap from feeding.
- Please make sure the actuator working normally.

### ERROR (M306), LOW STRAP

It means pool feed runs overtime but still insufficient strap in pool box. Please check if the Pool Feed structure is clean and Pool Feed motor works normally.

#### ERROR (M307), SHORT FEED

It means the machine already feeds in maximum time but still not able to arrive the actuator.

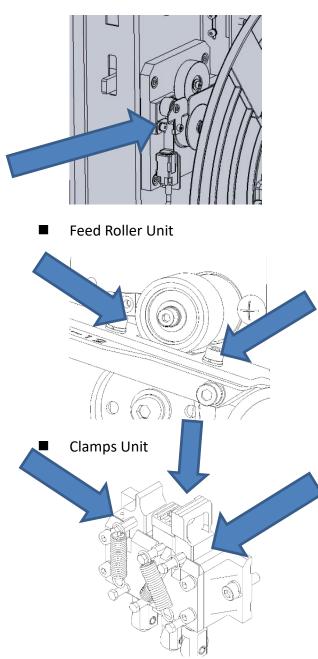

- Please make sure strap in Pool Box is not curved too much
- Please make sure Feed Roller are in good gap and pressure adjustment (please follow operation manual 5.3 Feeding / Refeeding pressure & gap)
- Please make sure all strap guiding are in proper adjustment, if the adjustment is too tight, it could catch the strap from feeding.
- Please make sure the actuator working normally.
- Please make sure the arch is complete close when in zero position. You are able to pull the arch open arm for open the arch and the arch will be close, when release the open arm.

## **7. MAINTENANCE**

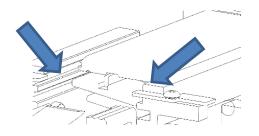

Noted: Before doing any maintenance or service, please do switch off the main power on the machine, then wait about 5 minutes to cool down the heater plate.

#### Weekly Maintenance:

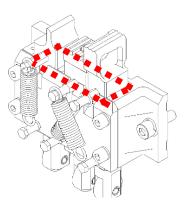

- Use air gun to clean dust from the machine, especially following clean dust from following structures:
  - Pool Feed Unit

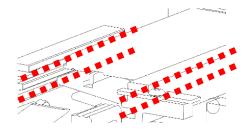

Sliding table Unit & Separator Unit

- Lubrication on moving mechanism , especially lubricate on following structures:
  - Clamps Unit

■ Sliding table Unit & Separator Unit

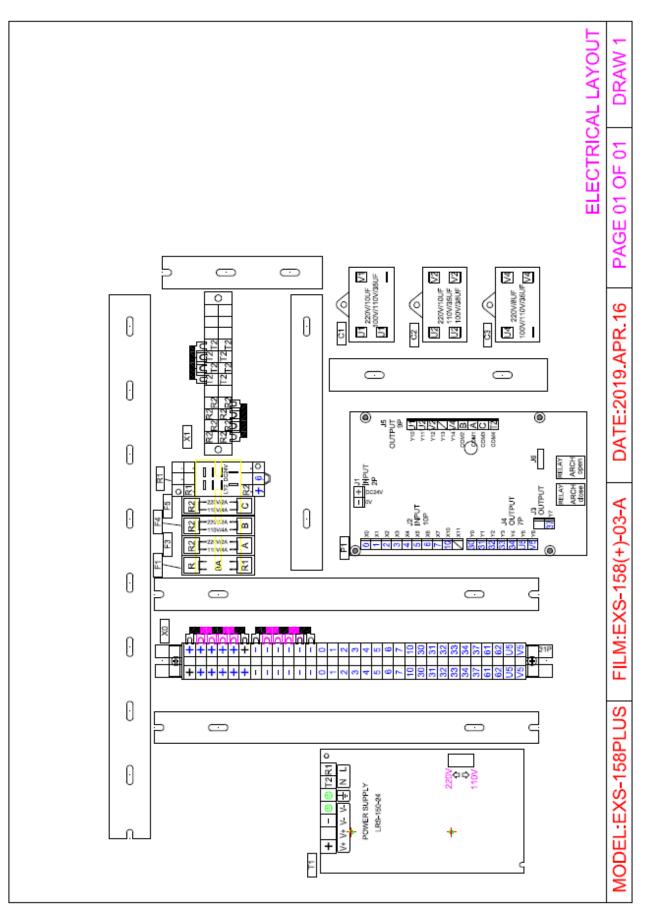

Noted: Do not lubricate on any bandway or guide where transport strap.

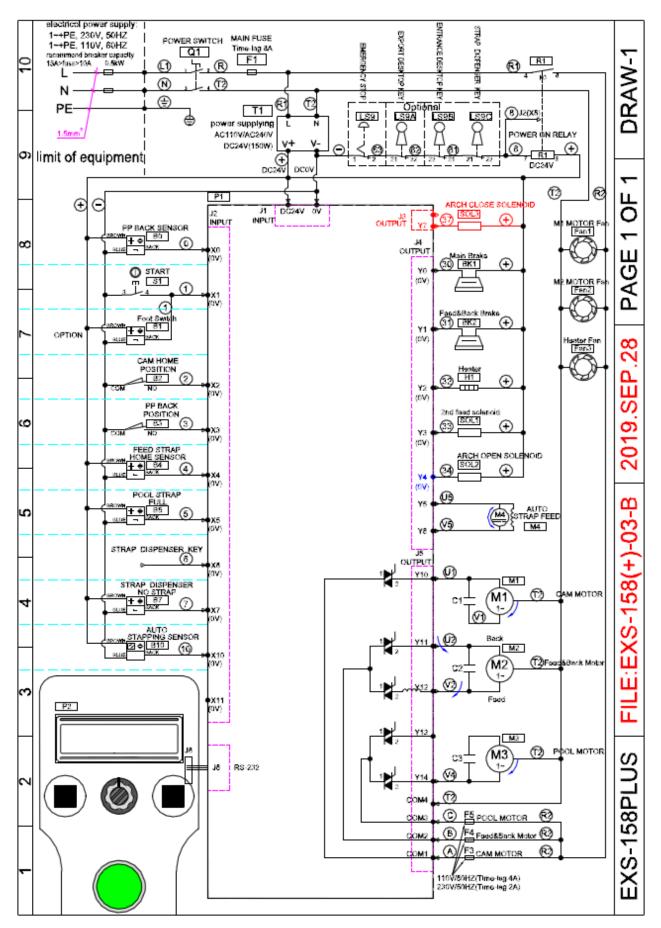

#### **Monthly Maintenance:**

- Please take out END GRIPPER UNIT and WELDING CLAMP UNIT to do complete cleaning and lubrication
- Please clean both sides (upper/lower) of Heater Plate
- Please check all structure with spring if working smoothly
- Please clean dust around sensor, limit switch
- Please clean dust accumulated on rollers (Pool Feed Roller, Tension Roller, Feed Roller)

# 8. ELECTRIC WIRING DIAGRAM & PART
